

NAME

chmod, fchmod - change permissions of a file

SYNOPSIS

```
#include <sys/types.h>
#include <sys/stat.h>
```

```
int chmod(const char *path, mode_t mode);
int fchmod(int fildes, mode_t mode);
```

DESCRIPTION

The mode of the file given by path or referenced by fields is changed.

varianti **chown** gestiscono il cambio di proprietà

Comandi shell basici per l’interazione con il File System

link	makes hard links
ln	makes symbolic links
